

WESTERN INDIAN OCEAN

MARINE PROTECTED AREAS OUTLOOK

Towards achievement of the Sustainable Development Goals

Western Indian Ocean Marine Protected Areas Outlook: Towards achievement of the Sustainable Development Goals

A story of regional collaboration

WIOSAP Outputs under development

- *MPA and Critical Habitats Outlooks – SDG 14*
- *Mangrove Restoration Guideline*
- *Seagrass Restoration Guideline*
- *Climate Change Toolkit: 3 Critical Habitats*
- *Eflow Assessment Toolkit*
- *Economic Valuation Guideline*
- *Assessment of alternative Livelihoods: Lessons*
- *CHM*

SUSTAINABLE DEVELOPMENT GOAL 14

Conserve and sustainably use the oceans, seas and marine resources for sustainable development

- Target 14.2 calls for the *sustainable management and protection of marine and coastal ecosystems to avoid significant adverse impacts, including by strengthening their resilience, and take action for their restoration, to achieve healthy and productive oceans by 2020* while Target 14.5 states that by 2020, *countries shall conserve at least 10 per cent of coastal and marine areas, consistent with national and international law and based on best available scientific information*

Key products/outcomes

Primary

- MPA Outlook
- Critical habitats Outlook
- 'Recommendations' Outlook
- Database of MPAs & Critical habitats
- A Dashboard
- Contribution to the revision of the Protocol on Protected Fauna and Flora of the Nairobi Convention
- Adoption of the outcomes by the countries
- Contribution to the next edition of the Regional State of the Coast Report

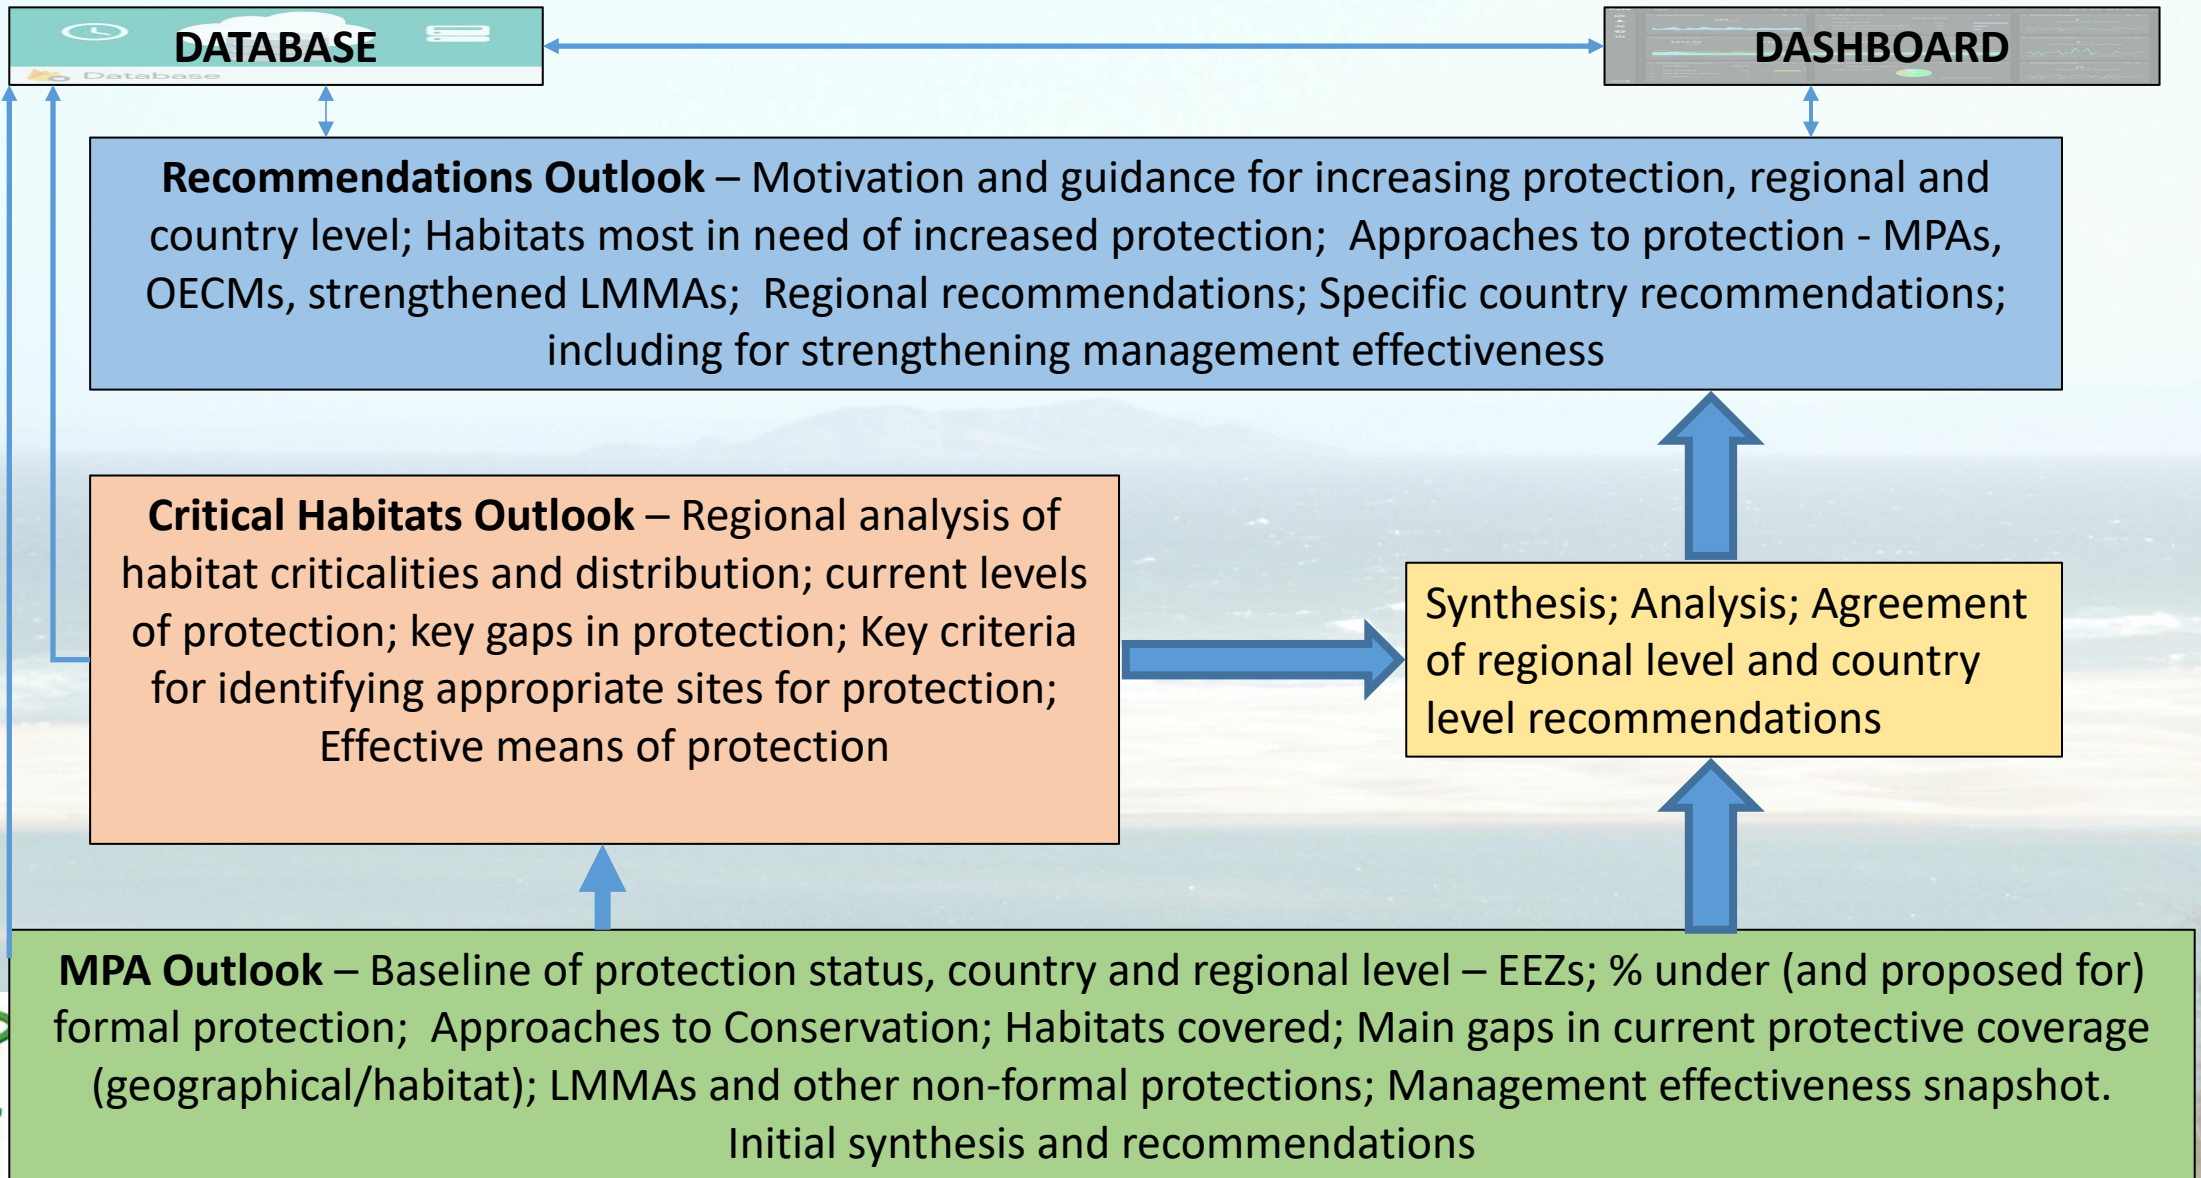

Key products/outcomes

Secondary

- Templates for national reports on SDG 14
- Identification of information gaps and priority areas for research & conservation
- Policy briefs and other products
- Setting up of a regional MPA Network
- Making the case for the establishment MPAs; success stories drawn from global experiences

Maps and database	Joseph Maina
Editor & Part II & Part V	Lawrence Sisitka

MPA Outlook Scope...

- Establishing a comprehensive baseline on all MPAs (formal and informal) within the waters (EEZs) of the 10 Contracting Parties to the Nairobi Convention
- Collating details on all aspects of the MPAs: history; legislative framework; size; location; habitats and species; zonations; governance; management; community involvement/benefits; risks and challenges; planning frameworks; management effectiveness...
- Sourcing and developing fine-scale geo-referenced maps of all MPAs
- Including critical baseline information in Outlook country chapters
- Storing all information and geo-referenced maps on a regional CHM
- Conducting a broad review of MPA management effectiveness across the region

...and Aims

- To inform recommendations to regional governments in relation to increasing coastal and marine areas under conservation, in line with SDG 14
- To establish a repository of MPA information which can be updated as new sites are proclaimed and new information becomes available

Critical Habitats Outlook Scope...

- To establish a baseline of the extent and location of critical marine habitats across the region
- To identify the types and levels of threat to which these habitats are subject
- To assess the extent of these habitats currently under some form of protection (from MPAs Outlook)
- To identify the habitats most in need of increased protection, and where this protection would be most effective in terms of conservation of the habitat and the species they support

...and Aims

- To inform recommendations to contracting parties in regard to increasing protection of marine habitats
- To establish a repository of information on critical habitats which can be updated as new information becomes available through ongoing research and as further areas become protected

More specifically the body of the *MPA Outlook* is structured as follows:

Part I

Outlines the purpose of the publication, the key reasons for preparing and documenting the challenges faced

Part II

Describes the international and regional conservation context in which the MPA network is located

Part III

Provides detailed information on proposed MPA sites (and their equivalents) in each VMEC region, including information on proposed management and governance under less formal for

Part IV

Provides an assessment of the management effectiveness of MPAs across the region, and makes initial recommendations for improving levels of management effectiveness.

Part V

Draws on the information provided to analyse the current situation regarding marine conservation in the WIO region, in particular in relation to the achievement of the SDG and Aichi targets. Part V also makes initial recommendations on where future marine conservation efforts, particularly the siting of MPAs, might be concentrated.

Structure of Part III Country Chapters

Section 1 “Country Overview”

Section 2 “MPA Overview”

Section 3: “Marine Areas under Protection”

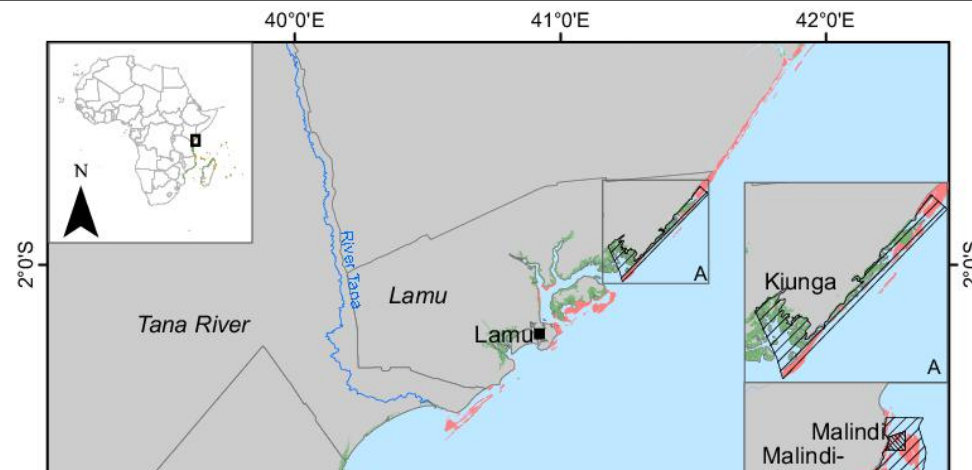

Section 4: “Proposed MPAs (or equivalent) and Areas under Consideration for Formal Protection

Section 5: “Non-formal Protected Areas” (VMAs, LMMAs, or other designations)

Persistence

Table 1: Details of Tanzania Marine Parks

NAME and DESIGNATION	PROCLAMATION LEGISLATION YEAR
Mafia Island Marine Park (MIMP)	Established 1994 under MPRs Act No. 10 of 1994
Coastal/epipelagic and a small portion of deep sea area	Conservation of marine ecosystems including coral reefs and mangroves
Mafia District, Coast Region	are spawning grounds for fish and other marine life, as well as turtles and other endangered species

Despite the government's control, in order to effectively manage the marine resources, the government has initiated a community-based management approach. Currently, the government is considering the practicality of this approach in other parts of Tanzania.

The Department of Environmental Affairs is pleased to announce that the Cabinet has approved a network of 20 Marine Protected Areas (MPAs) that are representative of South Africa's rich coastal and ocean biodiversity. This will increase the ocean protection within the South African Exclusive Economic Zone (EEZ) to 5%.

"This network of 20 MPAs, approved by Cabinet on Wednesday, 24 October 2018, will considerably advance South Africa's efforts to protect our ocean heritage for future generations. They will contribute to fisheries sustainability, advance marine ecotourism, and will help maintain resilience in ecosystems that are under stress from climate change", said the Acting Minister of Environmental Affairs, Mr Derek Hanekom.

Work on the new approved network of MPAs dates back to 2014, when the South African government endorsed a plan to achieve, as part of Operation Phakisa: Ocean Economy, a viable network of MPAs.

"South Africa's ocean space, which is one of the most varied in the world, is highly productive with rich biodiversity providing living and non-living resources that contribute significantly to the country's economy and to job creation. As we grow and intensify the ocean economy, it is essential to provide the necessary protection to a representative sample of marine ecosystems, thereby ensuring their resilience to human use and impact, and to the impacts associated with climate change", said Minister Hanekom.

Next Steps

- Appropriate text from countries having concerns on disputed territories
- Finalizing aspects in cross-cutting chapters
- Finalizing layout and design for all chapters
- Type-setting
- Publication
- Launch
