# Data and information

## **Available information and data in GIS maps**

### **Full Protection Zones**

The Protection Zones comprise significant areas in terms of the protection and conservation of systems and natural values of significant importance or in need of total protection, and their management objectives are priority over any other uses, activities and functions.

### **Qualified Areas**

Qualified Zones result from legal impositions, or administrative acts, which have the public utility as their objective, and which may result in prohibitions or limitations.

### **Areas of Existing uses, activities and functions**

Are all those areas that are reserved for a certain use, activity or function, developed under the Private Use of National Maritime Space (TUPEM) or Land Use and Benefit Rights (DUAT) titles, in the case of coastal zone, or other titles or commitments for private use issued under previous legislation

# Next Steps

Main challenges and gaps	<ul style="list-style-type: none"><li>• <b>A need for an Information Management strategy and system;</b></li><li>• <b>Development of a “landing site” sectorial platform for data sharing and management;</b></li><li>• <b>Operationalization and expansion of POEM Webgis to incorporate more data and information</b></li></ul>
What support is required	<ul style="list-style-type: none"><li>• <b>Capacity building and trainings</b></li></ul>
